### **ABSTRACT**

The purpose of this research is (1) to study the relationship between corporate governance scores (CGR) and profitability using profitability ratios of the listed companies in the Stock Exchange of Thailand. (2) To study the correlation between corporate governance rating (CGR) and corporate value using Tobin's Q of the listed companies in the Stock Exchange of Thailand (3) to compare the level of relationship between the scores. Corporate Governance Assessment (CGR) with profitability using profitability ratios and values of the listed companies in the Stock Exchange of Thailand. (4) To compare the differences between the companies with better CG scores and the lower scores with the ability of Profitability using profitability ratios. And the value of the business using Tobin's Q of the listed companies in the Stock Exchange of Thailand. Quantitative research emphasizes descriptive research and uses inference analysis. The data was collected from SET-SMART database.

The results showed that the corporate governance rating there is a correlation between profitability and return on equity (ROE) in terms of ROE and ROA. The assessment of corporate governance has no relationship with the net profit margin (NP) and the share price to earnings ratio (PE) and corporate value (Tobin's Q) were also found. Companies with better CG scores than those with lower CG scores, profitability there is no difference in the return on equity (ROA) and return on equity (ROE).
