ABSTRACT

Study of the objective is to study the development of the rail system extension in Chiang Mai for efficient public transport. Use interview form as a tool for collecting information from tourists traveling to Chiang Mai and officials from the Transport and Traffic Policy and Planning Department, Chiang Mai Province and studies from related documents and research. The research found that

1. Chiang Mai has problems with heavy traffic causing a lot of traffic jams. This is because Chiang Mai is a densely populated province with a large number of vehicles. In addition, Chiang Mai is a province with tourist attractions that are popular with Thai and foreign tourists thus causing a lot of travel into the tourists. Therefore, Chiang Mai has sprung up in the light rail project to solve the traffic congestion at the point of heavy traffic which consists of 3 lines of the electric train project, there are red line, green line and blue line. According to studies, it has been found that Such mass transit projects have an effect on reducing traffic jams in Chiang Mai. But still found problems with the connection point of the sky train station to major tourist attractions such as San Kamphaeng District.

2. Guidelines for the development of the rail system extension in Chiang Mai between the connecting point of Promeda Department Store - San Kamphaeng District should have a connect point development project to be concrete for traveling by efficient public transport.
