ABSTRACT

The objective of the research is to create a model law on the management of public land for the common use of citizen. Research methodology is qualitative research consisting of documentary research; in-depth interviews; participatory design, co- design; and hearing.

The research found out that the problems of managing public land for common citizen use should be enforceable by appropriate and precise specific law in order to solve the problems of misused and invasion of public land. The model law on the management of the public land for common citizen use with the structure of model law consisting of category of use; persons who have rights to use; the management; administrative agency; process of administration; community rules; surveillance and conciliation to be the measures to protect public land.

The research suggested the guideline for the implementation of the use of public land that educate citizen for the correct use of public land; issue a subordinate legislation to set up process of the management of public land for common citizen use. Further research title is recommended to be “Legal measure for the promotion of green area in community for common use”.
