ABSTRACT

This research objective is to set up the Model of administrative management on the participation of private sector on planting of perennial trees to reduce global warming. The research methodology to collect and analyze data is qualitative research consisting of documentary research; focus group; in-depth interview; Participatory Design, Co- Design and hearing.

Summary of research results according to research objectives are as follows: Item 1. To study and research related concepts, theories and principles of the sectoral participation model. Private in planting perennial trees to reduce global warming Article 2. To study and analyze patterns of use of perennial trees to reduce global warming in foreign countries. Article 3. To study and analyze the approaches and factors leading to the integration between the private sector and the local government in planting perennial trees to reduce global warming. Article 4. To establish a model of private sector participation in Planting perennials to reduce global warming

The research recommends that the government should set a policy to reduce global warming through encouraging people from all sectors participating in tree planting. The policy will encourage all sectors in Thailand using the policy into practice under the principle of participation, and Thailand, a developing country will be recognized as a part of country reducing global warming problem.
